

Children (birth to 10 years)

We're here to help you make your health a priority. To get started, use our preventive care checklists highlighting some of the exams, vaccines and screenings that can help you and your loved ones avoid or minimize potential health problems.1 No matter how healthy you are today, having a discussion with your doctor about preventive care can make a difference in the long run—for you and the people you care about.

Vaccines required for school admission for this age include DTaP, Tdap (Adolescents), Hepatitis B, Hib, MMR, Varicella and Polio. Other vaccines are not required for school admission, but are strongly recommended to protect your child from serious, life-threatening infections.

WELL-CHILD EXAMS / VACCINES / SCREENINGS	AGE / FREQUENCY	✓
