

DHMP Medicare Advantage Risk Adjustment in 2021

Each January 1, Medicare resets a member's health status, meaning a Medicare member is considered **completely healthy until diagnosis codes are reported** on claims.

In this new year, it is essential that providers capture all **current and active diagnoses for each member**, as well as re-capture any **diagnoses related to the member's chronic conditions** annually. This helps ensure that DHMP has the resources needed to provide quality care to our members.

DHMP has created a short training presentation on Medicare Advantage Risk Adjustment. Please take a few moments to review the training at the following link: denverhealthmedicalplan.org/medicare-advantage-risk-adjustment-training-providers

Contact DHMP's Medicare Risk Adjustment Analyst at 303-602-2134 if you have any questions regarding this training or Medicare risk adjustment in general.

Thank you!
