

DHMP Medicare Advantage: Capturing Diagnosis Codes for Risk Adjustment

REMINDER TO MEDICARE PROVIDERS:

When rendering services to DHMP Medicare Advantage members, **capture the patient's health conditions as diagnosis codes**; NOT ONLY in the medical notes and problem list.

Please also ensure the diagnosis codes accurately reflect the conditions documented in the medical record. For example, a code for diabetes mellitus without complications should not be supported by notes that list multiple complications.

If DHMP does not capture the diagnosis codes, we will not receive the appropriate federal compensation for the care of our Medicare members.

Contact DHMP's Medicare Risk Adjustment Analyst at 303-602-2134 if you have any questions regarding this announcement or Medicare risk adjustment in general. Thank you!
