DHMP Pharmacy Notification: Medicare Part D Benefit Updates

» DHMP Medicare Part D pharmacy benefits are changing, allowing providers to prescribe 100 day supplies for statins, ACE inhibitors, angiotensin receptor blockers, and diabetes medications (excluding insulin).

» Our goal is to improve medication adherence. Providing larger day supplies of these medications can improve adherence rates.

» Currently, providers receive faxed requests to increase the day supply on prescription orders to 90 day supply.

» Starting this month (June 2021), these faxes will request providers update prescription orders to 100 day supply.

» The process of how you receive these requests is not changing.

» **ACTION:** update orders to 100 day supply when appropriate.

If you have questions, please email the DHMP Pharmacy Dept: ManagedCarePAR@dhha.org
