DHMP Medicare Advantage: Risk Adjustment in 2022

As of January 1, the health status for all Medicare members has been reset!

Medicare members are considered completely healthy until diagnosis codes are reported on claims, so it is essential that providers capture all current and active diagnoses for each member, as well as re-capture any diagnoses related to each member’s chronic conditions. This helps ensure that DHMP has the resources needed to provide quality care to our members.

Additionally, any diagnoses captured in telephone-only visits do not count towards risk adjustment. Please make every effort to see Medicare members in person at least once during 2022!

For additional information on Medicare Risk Adjustment, please see DHMP’s short training presentation at the following link: denverhealthmedicalplan.org/medicare-advantage-risk-adjustment-training-providers

Contact DHMP’s Medicare Risk Adjustment Analyst at 303-602-2134 if you have any questions regarding this announcement, or Medicare risk adjustment in general. Thank you!
