

Clinical Practice Guidelines

Denver Health Medical Plan, Inc. (DHMP) adopts and disseminates clinical practice guidelines (CPGs), which serve as valuable clinical resources, helping to inform and support practitioner's decisions in the delivery of acute, chronic, and behavioral health services at the point of care. CPGs aid providers in offering patients evidence-based care that aligns with established professional standards. These guidelines are based on high-quality, evidence-based care from recognized scientific sources. Clinical practice guidelines are also used to guide efforts to improve the quality of care for our members, as well as to facilitate the implementation of evidence-based clinical recommendations into practice.

DHMP Clinical Guidelines include, but are not limited to, Diabetes Management, Treatment of Depression, Perinatal Care, and Management of Asthma. Guidelines are reviewed and revised as is appropriate and our full list of guidelines is available on the DHMP website at:
